[illegible]

The chart displays the historical data of airplane crashes, categorized by location: Aboard (red), Fatalities (yellow), and Ground (green). The total count of crashes is represented by the height of the stacked areas. The data shows a significant increase in crashes starting around 1930, with a major peak in the late 1990s, reaching nearly 9,000 crashes in 1999. The 'Aboard' category is the most prominent, followed by 'Fatalities', and 'Ground' is the smallest category.
